January 1, 2011 --

USA Industries, Inc. introduces our NEW EZ® Torque Gasket made for our Shoulder / Header plugs that are inserted in Fin Fan Header Boxes and Assemblies.

USA Industries' NEW EZ® Torque Gasket is made with a special machined metal inner core and bonded with a graphite face. These gaskets are made to provide a **positive seal** and **require less than half the installation torque** required for typical soft iron gaskets.

The lower torque means no more stripping out threads preventing the gasket from sealing properly.

- Virtually eliminates field remachining
- Low Torque Design
- No environmental leaks
- Graphite greatly eliminates atmospheric corrosion
- Metal core available in any material required - 316SS, Inconel, Hastelloy, Nickel, etc.
- Can be used with existing plugs currently in operation
- Quick delivery - Phones answered 24/7

For more information on our EZ® Torque Shoulder / Header plug gaskets for Fin Fan Assemblies, contact our Experienced Sales Team at 713-941-3797 or 800-456-8721.
